

Global NOC Intelligence & Forecasting Platform

Portfolio Case Study – Inyiagu Ebuka Richard

This portfolio project demonstrates end-to-end data analytics, business intelligence, forecasting, governance analytics, and executive reporting using the NRG National Oil Company dataset.

Executive Summary

Built a comprehensive analytics platform for evaluating transparency, governance, reporting quality, and future trends across National Oil Companies.

Business Problem

Stakeholders require visibility into reporting quality, audit coverage, and transparency performance across countries and companies.

Tech Stack

Python, SQL, PostgreSQL, Power BI, Pandas, NumPy, Scikit-Learn, Prophet, GitHub.

Data Engineering

Performed data cleaning, duplicate removal, missing value treatment, observation standardization, and feature engineering.

Analytics

Regional benchmarking, company benchmarking, transparency scoring, audit coverage analysis, and trend analysis.

Machine Learning

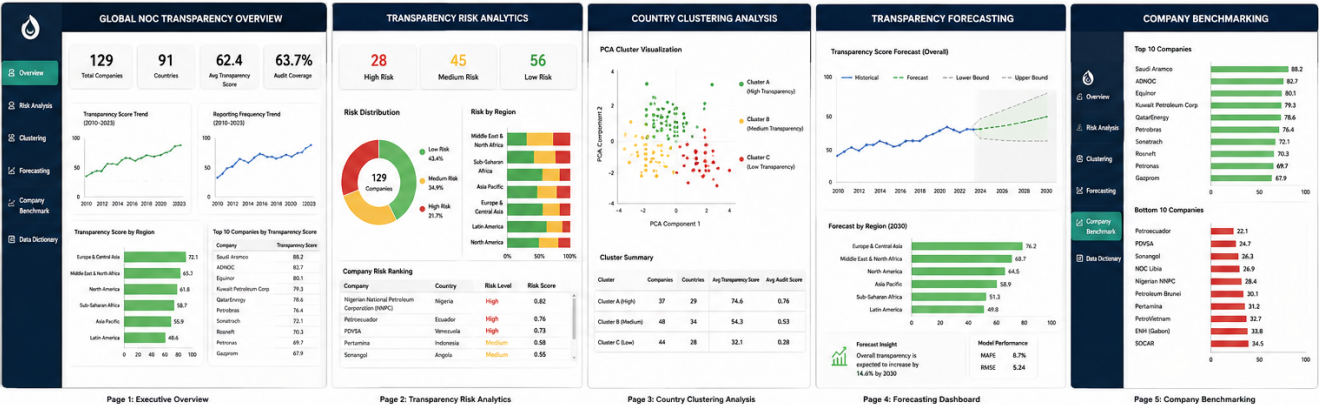

Risk classification, country clustering, and forecasting models.

Business Impact

Provides executives with strategic insights and transparency benchmarking.
